Research Experience

- 2020-present **Graduate Research Assistant**, Stanford University
Adviser: *Prof. Kent Irwin*
Member of Dark Matter Radio (DMRadio) collaboration. DMRadio is a series of experiments searching for ultra-light axions, with expected sensitivity to the QCD axion in the 30-200 MHz range. Responsible for designing and testing a novel quantum device, Radiofrequency Quantum Upconverters (RQUs), which will be implemented on DM radio 50L. Carrying out COMSOL simulations and analytic calculations for thermal and electromagnetic properties of DMRadio 50L and m^3 . In charge of cryogenic testing of Superconducting Quantum Interference Devices (SQUIDs) for cosmology projects, such as the BICEP Array, and training a rotating student in this area.
- 2019-2020 **Graduate Research Assistant**, Stanford Institute for Theoretical Physics
Adviser: *Prof. Savas Dimopoulos*
Studied the physics and phenomenology of dense dark matter axion clumps (oscillons) in the context of oscillon-neutron star collisions. Using current sensitivity of radio telescopes, set limits on the abundance of oscillons in galactic dark matter halos in terms of the axion mass and symmetry breaking scale.

2016-2019 **Undergraduate Research Assistant**, UC Berkeley

Advisor: *Prof. Karl van Bibber*

Member of the *Haloscope at Yale Sensitive to Axion Cold Dark Matter (HAYSTAC)* collaboration.

HAYSTAC is an experiment designed to search for μeV mass axions. Designed and refurbished microwave cavities used in experimental runs. Co-lead on refurbishment and optimization for cavity used in first fundamental physics result to evade the standard quantum limit. Introduced extensive use of finite element simulation techniques for characterization of axion haloscopes.
